International Phonetic Association

The principles of the International
Phonetic Association.

The background of the entire page is a dark, textured marbled paper. It features a complex, organic pattern of swirling, vein-like shapes in various shades of gray, black, and white, creating a rich, tactile appearance.

THE PRINCIPLES OF THE INTERNATIONAL PHONETIC ASSOCIATION

HISTORY AND AIMS OF THE ASSOCIATION

1. The **International Phonetic Association** is a Society consisting of persons interested in the science of **phonetics**. Its main object is to promote the scientific study of phonetics and the various practical applications of that science.

2. The Association was founded in 1886. In 1888, after consulting the opinion of its members, the Association drew up an **International Phonetic Alphabet**, by means of which the pronunciation of any language may be accurately represented. This alphabet has been used ever since (with a few additions and improvements) in the **Maitre Phonétique**, the official organ of the Association (see § 16).

3. The system has also become very widely used by language teachers and others outside the Society, in fact, this alphabet is at the present time far more widely used than any other phonetic system and bids fair to become universal¹). There are several hundred books in which the International Phonetic Alphabet is used; the more important works, about 200 in number, are mentioned in the bibliography²) (p. 32 ff.).

4. Among the publishers and printers possessing **International Phonetic types** may be mentioned the Clarendon Press, Cambridge University Press, London University Press, Wm. Clowes (London),

1. For statistics with regard to England see *The Means of Training in Phonetics available for Language Teachers* by L. H. Althaus, page 6, (published by the Association, price 6 d). See also bibliography, p. 32 ff.

2. One publisher (Groos of Heidelberg) has issued over 70 books in which International Phonetic Script is used.

Turnbull and Spears (Edinburgh), Teubner (Leipzig), Reisland (Leipzig), Hesse & Becker (Leipzig), Didier (Paris), Gyldendal (Copenhagen). Messrs Wm. Clowes are about to cast a fount of International Phonetic type which will be specially approved by the Council of the Association¹). **Typewriters** containing International Phonetic types are supplied by the Ideal Typewriter Co. (115^a Queen Victoria St., London, E.C.)²).

5. Among the languages which have been transcribed by means of the International phonetic alphabet are: English, French, German (with numerous dialects of each), Dutch, Italian, Spanish (including Chilian), Portuguese, Catalanian, Roumanian, Latin, Greek, Norwegian, Danish, Swedish, Icelandic, Finnish, Hungarian, Russian, Polish, Czech, Lettish, Welsh, Breton, Syriac, Arabic, Urdu, Panjabi, Chinese (both Mandarin and Cantonese), Japanese, Burmese, Javanese, Zulu, Odjibway (North American Indians), Aleutian.

6. It must be understood, however, that the Association is in no way bound to its alphabet. Not only are its members at liberty to use any other system they may prefer (except in the *Maitre Phonétique*), but they are invited to suggest such alterations and improvements as they may think desirable. Such suggestions are often discussed in the *Maitre Phonétique* and may be submitted to the Council at the annual consultation (§ 16).

7. The Association has always favoured a radical reform of **language teaching** by the adoption of "direct" or "inductive" methods, and has played no small part in bringing about the present widespread use of these methods.

8. The principles of the Association, as regards the **teaching of foreign languages**, are summed up in the following six articles³):

(i). The first thing to be studied in a foreign language is not the more or less archaic language of literature, but the spoken language of ordinary conversation.

1. Messrs Clowes will be prepared to sell these types for export.

2. Two machines are issued (1) a "**Bijou Phonetic**" Typewriter containing (in addition to the ordinary letters) the phonetic types required for the ordinary transcription of English, French und German, price £ 13.13.0, and (2) a "**Complete International Phonetic**" Typewriter containing (in addition to the ordinary letters) the whole of the International symbols price £ 27.10.0. *A special discount of £ 1 on each machine is allowed to members of the Association.* Members wishing to avail themselves of this arrangement should apply to the headquarters of the Association.

3. These articles embody the general tendencies of the Association and not the individual opinion of each member.

(ii). The teacher's first care should be to make his pupils perfectly familiar with the sounds of the foreign language. To ensure a correct use of the foreign sounds he will make use of a phonetic transcription, which should be employed to the exclusion of the traditional spelling during the initial stages.

(iii). The teacher's next aim should be to impart a perfect command of the commonest phrases and idioms of the foreign language. To obtain this result he will use connected texts, dialogues, descriptions and narratives, all as easy, natural and interesting as possible.

(iv). Grammar will at first be taught inductively, by grouping together and drawing general conclusions from such facts as are observed in reading. A more systematic study is to be kept for a later stage.

(v). The teacher will endeavour to connect the words of the foreign language directly with the ideas they express, or with other words of the same language, not with those of the mother tongue. Translation will therefore be replaced, as far as possible, by object-lessons, picture-lessons, and explanations in the foreign language.

(vi). When, at a later period, written work is introduced it will consist at first of the reproduction of matter already read and explained, then the reproduction of stories, etc., which the pupils have heard the teacher tell; free composition will come next; translation from and into the foreign language is to be kept till the end.

9. The Association also recommends the use of phonetics and phonetic transcription in connexion with the **teaching of the mother tongue**, particularly for the purpose of studying dialectal peculiarities and correcting the indistinctness and artificialities which unfortunately mar the pronunciation of so many. The Association also recommends the use of phonetic script in connexion with the **teaching of reading**.

10. The Association has also done much towards encouraging **phonetic research**. Many important works on philology and other branches of language study have been written by its members. It is largely owing to the influence of the Association that **courses of instruction in phonetics** have been instituted at various universities, and that "applied phonetics" has become a prominent feature of nearly all holiday-courses for teachers.

11. The Association has instituted an official **examination in phonetics**, and grants a diploma to persons attaining a certain standard. (Particulars may be obtained from the secretaries.)

12. Though not directly concerned with **Spelling Reform**, the Association regards with favour the work of the various spelling reform Societies, and has been able to help the movement indirectly by showing up the imperfections which are to be found in the current spelling of most languages.

13. Finally, it may be stated that the constant intercourse between the members of the Association has tended to create among language teachers all over the world a spirit of good feeling, which is as conducive to scientific progress as to the advancement of peace between nations.

CONSTITUTION OF THE ASSOCIATION

14. The Association is governed by an **International Council** of 30, elected by the members every other year.

15. The following is a list of the **members of the Council** for 1912—1913. Those marked * are members of the Executive Committee.

President: **W. Vietor**, Ph. D., M. A., Professor of English at the University of Marburg, Germany.

Vice-Presidents: **O. Jespersen**, Ph. D., Professor of English at the University of Copenhagen; **E. R. Edwards**, Docteur de l'Université de Paris, H. M. Inspector of Schools, London.

Secretaries: ***Paul Passy**, D. ès L., Professor of Phonetics at the Ecole des Hautes Etudes, Paris; ***Daniel Jones**, M. A., Lecturer on Phonetics at University College, London.

Treasurer: ***Mlle S. Lund**, language teacher, Bourg-la-Reine, France.

Other members of the Council: **Jose M^a Arteaga Pereira**, Barcelona; **A. T. Baker**, M. A., Ph. D., Professor of French at the University of Sheffield; **J. Cameron**, Professor of Romance Languages at University College, Toronto, Canada; **A. Camilli**, Rome; ***C. Cloos**, French and British Consul, Frederikshavn, Denmark; **A. Frinta**, Ph. D., Plzeň, Bohemia; **C. Grandgent**, Professor of Romance Languages, Harvard University, Boston, U. S. A.; **R. Lenz**, Ph. D., Director of the Pedagogical Institute, Santiago, Chili; **E. A. Meyer**, Ph. D., Lecturer on German at Handelshogskolan, Stockholm; **E. Nader**, language teacher, Vienna; **A. Rambeau**, Assistant Professor of Romance languages at the University of Berlin; **W. Rippmann**, M. A., Professor of German at Queen's College, London; **Th. Rosset**,

Professor of French Philology at the University of Grenoble, France; **L. Ščerba**, Lecturer at the University of St. Petersburg; **Frk. E. Simonsen**, Copenhagen; ***J. Spieser**, pastor, Waldhambach i. Elsass, Germany; **Ch. Thudichum**, Director of the International College, Geneva; **W. Tilly**, Groß-Lichterfelde-West, Berlin; **O. J. Tallgren**, Helsinki, Finland; **A. R. G. Vianna**, Corresponding member of the Academy of Science, Lisbon; **E. Waterhouse**, Senior Lecturer in modern languages at the Teachers' College, Sydney, Australia; **R. Weeks**, Professor of French at Columbia University, New York; **A. Western**, Ph. D., Headmaster of the High School, Frederiksstad, Norway; **J. A. Yates**, M. A., H. M. Inspector of Schools, Waltair, India.

16. Any questions that may arise regarding the policy or the administration of the Association, the adoption of new symbols, the alteration of existing symbols, etc., are referred to the Council at an annual consultation. Members desiring to bring any matter before the Council may apply to one of the Secretaries.

17. The Association now (August 1912) numbers over 1500 members. The members are distributed as follows: — England about 400, Germany about 350, United States about 120, France about 100, Denmark about 80, Austria-Hungary, Switzerland, Chili about 50 each, Sweden, Canada about 40 each, Italy about 30. There are also representatives of the following countries: — Holland, Belgium, Luxemburg, Spain, Portugal, Norway, Iceland, Finland, Russia, Poland, Turkey, Roumania, Brazil, Cuba, Costa Rica, Egypt, South Africa, India, Dutch East India, Indo-China, China, Japan, Australia, New Zealand.

18. Persons may join the Association either as 'ordinary' members or as 'active' members.

19. **Ordinary Members** receive free of charge the '*Maitre Phonétique*', the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. Jones, University College, London). The '*Maitre Phonétique*' is issued on the 30th of January, March, May, July, September and November of each year. It contains articles in various languages the International alphabet being used throughout. The articles deal with all branches of Phonetics and its applications, and give information respecting the progress made by the science in different parts of the world. The best methods of language-teaching are also discussed, and special texts suitable for students are given.

20. Every ordinary member is entitled to a *vote* at the election of members of the Council.

21. Every ordinary member whose subscription has been paid by Jan. 1st is entitled to 10 lines of free advertisement in the *Maître Phonétique* in the course of the year.

22. **Active Members** are those who are willing to work actively in the interests of the Association. They receive two copies of every *Maître Phonétique*, the additional copies being intended for propaganda purposes. Active members are eligible to serve on the Council, and are entitled to two votes at the elections.

23. Every active member whose subscription has been paid by Jan. 1st is entitled in the course of year to 25 lines of free advertisement in the *Maître Phonétique*.

24. The **Annual Subscriptions** are: —

For Ordinary Members 3 francs 50 c. (= 2 s. 10 d. = 70 cents = Kr. 2.50 [Scandinavian] = Rs 2 as. 2).

For Active Members 6 francs (= 4 s. 10 d. = 1 dollar 20 c. = Kr. 4.20 [Scandinavian] = Rs 4 as. 4).

25. Subscriptions are due on the 1st of January each year. They may be paid to D. Jones, Esq., University College, London, W. C., or direct to the Treasurer, Miss S. Lund, 27 Grande Rue, Bourg-la-Reine, Seine, France.

PHONETIC WRITING AND ITS USES

26. When the written form of a language represents with accuracy the pronunciation of the spoken language, the writing is said to be **phonetic**.

27. The principle of phonetic spelling is carried out consistently in many English words, e. g. *in, on, cat, dog, put, leg, strip, fulfil, itself, bandit*. But many other words are written quite unphonetically in current spelling: thus the first letter is silent in *hour* and the last in *lamb*; *right* and *write* are sounded alike but written differently; *lead* (noun) and *lead* (verb) are spelt alike but sounded differently. The current spelling of some languages is, at present, not far from phonetic; such are Italian, Spanish, Dutch, Croatian, Hungarian, Finnish. Others, such as English, French and Danish, are quite the reverse. It is, however, *possible* to write phonetically *any* language or in fact any variety of any language.

28. It has long been known to specialists that a phonetic system of writing is necessary for some objects; for instance,

shorthand, and the comparative study of languages or dialects. More recently, educationists have discovered that phonetic spelling could be used with great advantage in connexion with the teaching of foreign languages. For when a foreign language is taught by means of the traditional spelling, the pupils are constantly hampered by the contradictions between the spoken and written forms of the same words. When, on the other hand, the spoken words are accurately represented by means of a phonetic transcription, they are easily memorized, and the progress is much more rapid.

29. The advantages to be derived from the use of a **phonetic transcription in connexion with language teaching** are, however, now too well known to need much comment. It has been proved by countless experiments that persons who have made extensive use of phonetic theory and phonetic transcription¹), when studying a foreign language, generally have a far better pronunciation of the language than those who have only worked with the current spelling and imitation. There is also abundant evidence to show that the **transition from phonetic transcription to ordinary spelling** is not a difficult matter, and that pupils who have been thoroughly trained to write a foreign language phonetically are generally able to write the current spelling more accurately than those who have had no such training²).

30. A phonetic transcription is still more necessary to a student who endeavours to grapple with a foreign language without the help of a master. It enables him to work at any language without puzzling at every word to know how he should read it. This comes out most clearly in languages with a difficult or complicated system of writing, such as Chinese, Japanese, Burmese, Arabic or Syriac.

31. Further, a phonetic system is necessary for **recording languages hitherto unwritten** (see §§ 68—76). In this way it is of the utmost value to travellers, missionaries, and officials in distant colonies; likewise to those who are interested in that most fascinating branch of philology, the study of country dialects.

1. **Phonetic theory** teaches the student how to form the foreign sounds. **Phonetic transcription** teaches him how to use the right sound in the right place.

2. See V. Partington, *The Transition from Phonetic to Ordinary Spelling* (published by the Association, price 7d, to members 4d).

32. Phonetic writing may also be used with advantage in elementary school work, for **teaching children to read** the mother tongue. Learning to read by the usual methods is at best a long and dreary task; but where phonetic texts are used it becomes short and easy¹). When once a child reads phonetic texts fluently, the transition to the common spelling is shown by experience to be a matter of no great difficulty.

33. For the above reasons it is clear that every teacher, every educationist, every philanthropist or social reformer, should have at least some idea of what phonetic writing is; more particularly as, notwithstanding its foreign and somewhat startling appearance, its principles can be mastered in a few minutes, and tolerable fluency in reading it can be acquired in a few hours.

34. Finally, a thorough knowledge of phonetics and experience in the use of phonetic transcription is indispensable to all students of **philology**. Many of the most important changes in language have remained unrecorded either because there was no writing at the time or because the spelling was fixed and did not reflect the changes in the words. By using a phonetic transcription the nature of such changes may be clearly demonstrated²).

THE INTERNATIONAL PHONETIC ALPHABET

35. We can write phonetically in various ways. For instance, to express the first sound of the words *can*, *keep*, *quick*, we can choose any of the letters *c*, *k*, or *q*, as long as we are consistent, and always use *the same letter for the same sound*. We can write phonetically equally well with Roman or Gothic or Russian or Greek or Armenian or Sanscrit letters. As a matter of fact, shorthand writers write phonetically with a set of letters quite different from the ordinary letters of the alphabet.

36. The system described in the following pages is the international system referred to in § 2, and is recommended for general use. It is based upon the *Roman* alphabet, which is used by the great majority of civilized nations, — this alphabet being supplemented by a certain number of new symbols, just as the English

1. See particularly J. Spieser, *Ein Klassenversuch* (Scheffer, Leipzig) 2nd ed., 1912; also *Das begriffliche Lehrverfahren insbesondere beim Lesenlehren* by the same author (obtainable from the Secretaries of the Association).

2. See the books in section VIII of the bibliography (p. 38).

add *k*, *w*, *x* and *y*, to the 22 letters used in Italian, and as the Icelanders use the two letters *þ* and *ð* for the two sounds of the English *th*.

37. Further, this alphabet is based on *international usage*; that is, it gives to each letter as far as possible, the value it has for the majority of peoples using the Roman alphabet. Thus *z* is used for the sound of English *zeal*, which agrees with English, French and Dutch, but is contrary to German, Italian and Spanish usage; and *v* is used for the first sound in *veal*, according to English, French, Italian and Scandinavian usage, but contrary to German and Spanish. On the other hand, *j* has been taken for the first sound in *yet*, contrary to English, French and Spanish, but in accordance with German, Italian, Dutch and Scandinavian usage. In the International system the vowel letters *a*, *e*, *i*, *o* and *u* have, roughly speaking, what are called the Italian values.

38. This redistribution of letters according to international usage necessarily produces some forms that are startling at first sight. An Englishman, for instance, cannot help being startled when he sees *ji:st* written for *yeast* and *haus* for *house*. But it does not take long to accustom oneself to the international values of the letters, and once the difficulty is overcome, the advantages of using the same system for all languages are incalculable.

VALUES OF THE INTERNATIONAL PHONETIC SYMBOLS

39. We now give a **table of the International phonetic symbols**. They are arranged according to the mode of formation of the sounds which they represent.

40. The values of most of the symbols may be seen from their positions on the table. Thus, the phonetic symbol **p**, being in the column 'lips' and in the row 'plosive' denotes an explosive sound formed by the two lips (i. e. the usual sound of the letter *p*). Similarly the phonetic vowel-symbol **i**, being in the column 'front' and in the row 'close', denotes a type of vowel sound in which the front of the tongue¹) is raised high in the direction of the hard palate (for instance the second vowel sound in *machine*).

1. The 'front' of the tongue is defined in phonetics as the part of the tongue opposite the hard palate, when the tongue is in the position of rest.

	<i>Lips</i>	<i>Lip-teeth</i>	<i>Point and Blade</i>	<i>Front</i>	<i>Back</i>	<i>Uvula</i>	<i>Throat</i>
CONSONANTS	<i>Plosive</i>		t d	c ɟ	k ɡ	q ɢ	ʔ
	<i>Nasal</i>		n	ɲ	ɳ	ɴ	
	<i>Lateral</i>		l	ɭ	(ʎ)		
	<i>Rolled</i>		r	ɽ		ʀ	
	<i>Fricative</i>	f v	θ ð s z σ ρ ʃ ʒ ɹ	ç ʝ (ɥ)	(ɰ w) x ɣ	ʁ ʕ	ħ ʕ
VOWELS	<i>Close</i>	(u ü y)		<i>Front</i> i y ɪ ʏ	<i>Mixed</i> ï ü	<i>Back</i> u u ʊ	
	<i>Half-close</i>	(o ö ø)		e ø	ë ö	ʋ ɔ	
	<i>Half-open</i>	(ɔ ɔ̃ œ)		ɛ œ æ	ə ɛ̃ ɔ̃ ʌ ɔ		
	<i>Open</i>				ɶ a	ɶ ɑ	

(Sounds appearing twice on the chart have a double articulation, the secondary articulation being shown by the symbol in brackets.)

41. The above table appears somewhat complicated because it includes the symbols for all languages to which the International system has as yet been applied. A table of the sounds of one language only would be far simpler. Such tables will be found in many of the books mentioned in the bibliography.

42. We append some further brief indications of the values of those symbols whose value is not self-evident.

43. **Consonants.** The front plosive consonants **c, j** are heard in the Hungarian words *kotya*, *Magyar*; they may sometimes be observed in dialectal French in such words as *qui*, *gai* (**ci, je** for the standard **ki, ge**); they are the sounds meant in some novels by the spellings *kyart*, *gyard* (for *cart*, *guard*), representing pronunciations formerly current in vulgar speech. — **q** is the deep Arabic *qaf*. — **ʔ** is the 'glottal stop', i. e. the explosive sound heard (in an exaggerated form) in coughing; the sound is heard in North German pronunciation before initial stressed vowels; it is the Danish *stød*, Arabic *hamza*.

44. **j** is the *gn* of French *montagne*, Italian *ragno*, Spanish *ñ*, Portuguese *nh*; **ŋ** is the English and German *ng* of *ring*, **ɲ** is a uvular nasal occurring in Eskimo. **ɳ** may be used, when necessary, to represent the lip-teeth nasal. — **ʎ** is the Italian *gl* of *egli*, Spanish *ll*, Portuguese *lh*; **ɮ** designates a 'dark' (also called 'hard' or 'thick') variety of **l**, such as that in the English *people*, Russian *palka*, Portuguese *mil*. — **r** is the Italian and Scotch rolled *r*; **ʀ** the uvular *r* heard in Northumberland and in many parts of France, Germany, etc.; **ř** is the Czech 'fricative trill'.

45. **f, v** are lip fricative consonants. **f** is the sound we produce in blowing out a candle; it is the Japanese variety of **f**; **v** is the Spanish sound of *b* or *v* between vowels, as in *saber*, and one variety of Dutch *w*. — **w**, the sound of English *watch*, is formed by narrowing the air passage simultaneously between the lips and in the back of the mouth; **ɱ** is one variety of Northern English *wh*. **ɥ**, the sound of French *u* in *nuit*, is formed by narrowing the air passage between the lips and in the front of the mouth. — **θ, ð** stand for the sounds of *th* in *thin*, *then*. — **ɹ** is the untrilled lingual *r*, commonly heard in Southern English in *draw*, *red*; the same sign is provisionally made to stand for the Spanish 'soft *r*' in *pero*, which is a mere flap of the tongue. — **σ, ρ** are Bantu sounds; they have tongue position of **θ, ð**, combined with strong lip-rounding. — **ʃ, ʒ** are the sounds of *show*, *azure*, French *ch*, *j*. — **j** is the English sound of *y* in *yet*; **ç** is the German consonant in *ich*; it is sometimes

heard in English words such as *hue* (**hju:** or **ɥu:**). **x** is the sound of *ch* in the German *ach*, Scotch *loch*; **ɣ** is often heard in North German pronunciation of *wagen*, regularly in Dutch *vlaggen*. — **ɣ** is the deep Arabic *kh* in *khalifa*, often heard as a variety of Swiss German *ch* and Spanish *j*; **ʁ** is the Arabic *gh*, Danish *r*, often heard also as a variety of Parisian *r*. **ɦ** is the voiced *h* of Arabic, Czech, South African Dutch, etc.; it is sometimes heard in English instead of the ordinary *h* between two vowels. — The symbols **u** and **q** may be used for the Arabic *hha* and *'ain*.

46. Vowels. The following are the typical values of the chief vowel symbols:

<i>ee</i>	i	the sound of <i>i</i> in <i>machine</i> .
<i>ay</i>	e	" " " <i>e</i> " French <i>été</i> , Italian <i>bene</i> , German <i>See</i> ; also heard in Northern English pronunciation of <i>day</i> , etc.
	ɛ	" " " <i>e</i> " <i>there</i> (Southern English pronunciation), French <i>fer</i> , Italian <i>cielo</i> .
	a	" " " <i>a</i> " French <i>patte</i> , frequent also in Scotch pronunciation of <i>pat</i> .
<i>awe</i>	ɑ	" " " <i>a</i> " <i>father</i> , French <i>pas</i> .
<i>o</i>	ɔ	" " " <i>o</i> " Italian <i>notte</i> , French <i>port</i> .
<i>o</i>	o	" " " <i>o</i> " French <i>côte</i> , Italian <i>come</i> , Northern English pronunciation of <i>home</i> , etc.
<i>u</i>	u	" " " <i>u</i> " Italian <i>uno</i> , English <i>rule</i> .
	y	" " " <i>u</i> " French <i>pur</i> , <i>ü</i> in German <i>über</i> .
	ø	" " " <i>eu</i> " French <i>peu</i> , <i>ö</i> in German <i>hören</i> .
	œ	" " " <i>eu</i> " French <i>peur</i> , <i>ö</i> in German <i>Wörter</i> .

47. **æ** is the Southern English vowel in *man*; **ʌ** is the English vowel in *much*. **ɪ** is a sound intermediate between **i** and **e**; **ʊ** is a sound intermediate between **u** and **o**; **ɤ** is a sound intermediate between **y** and **ø**. **ʊ** is a vowel with the tongue position of **u** but with lips spread out; it occurs in Gaelic, Japanese, Armenian and Syriac.

48. **ĩ**, **ü**, **ë**, **ö**, **ẽ**, **ö**, are mixed (also called 'intermediate' or 'obscure') sounds: **ĩ** is the vowel in the Russian *syn*, **ü** that in Norwegian *hus*.

49. **ə** stands for any obscure vowel of neutral quality, like the first of English *again*. It is convenient to reserve this sign as far as possible for *unstressed* vowels. In cases where it is found desirable to distinguish two such vowels, the one with higher tongue position may be written **ə** and the one with lower tongue position **ʌ**.

50. Nasalized vowels are marked thus: *ã* French *an*, *ẽ* French vowel in *pain*, *ĩ* Portuguese vowel in *fim*, etc.

51. **Quantity, stress, intonation.** — **Length** of any sound is indicated by : placed after the phonetic symbol¹). **Half-length** may be marked by ˙. — **Stress** is marked when necessary, by the sign ˈ; it is recommended that the sign be placed *before* the stressed syllable²). **Intonation** is generally left unmarked. In Swedish and Norwegian texts, however, the sign ˘ is placed before the stressed syllable of words having the so-called 'compound tone'. No system of signs has yet been definitely adopted for languages such as Chinese in which word-tones are a significant element (see however § 85 and the Chinese and Burmese texts). The Association recommends, however, that the form of such signs should be devised so as to indicate graphically the musical values of the tones.

52. **Modifiers.** — Various devices make it possible to represent many shades of sounds not included in the alphabet. The following are the most important.

53. The difference between a breathed consonant (such as *s*) and its voiced correspondent (such as *z*) when not indicated by the shape of the letter, may be marked thus: *l̤* voiced *l* (the usual sound), *l̥* breathed *l* (Welsh *ll*). — Whispered sounds may be marked thus: *u̥*, *j̥*.

54. Inverted consonants (cerebrals), formed by turning up the point of the tongue, may be marked thus: *t̤*, *d̤*, *n̤*, *l̤*, *r̤*, *s̤*; the Arabic emphatics thus: *t̤̤*, *s̤̤*. etc.; consonants formed with simultaneous glottal closure, thus: *p̤*, *t̤*, *k̤*. "Assibilated" consonant groups, i. e. groups in which the two elements are so closely connected that the whole might be treated as a single sound, may be represented thus: *t̤ʃ*, *d̤z*, or thus: *t̤ʃ̤*, *d̤z̤*.

55. Palatalized consonants may be represented by means of a dot placed above the symbol of the normal sound (the dot suggesting the connexion with the sounds *i* and *j*), thus *ṣ̌*, *ṇ̃*, *ṛ̌*. Such sounds occur regularly in Russian and in Irish.

1. The use of a mark over the letter is undesirable on account of the difficulty of combining it with other diacritics such as ~.

2. From the scientific point of view it would be preferable to put the mark over the symbol of the stressed vowel, but there are practical objections to this plan, e. g. the necessity for cutting a large number of new types, and the desirability of keeping superposed diacritics for indicating shades of sound.

56. 'Tense' and 'lax' vowels may be distinguished respectively by acute and grave accents. Thus the English *sit* might be written *sit*¹) to distinguish it from the French *site* (*sit*).

57. ˆ after any letter means tongue slightly raised. ˘ means tongue slightly lowered. ˙ means lips more rounded; ˚ means lips more spread.

58. A syllabic consonant may be marked thus ȳ; the consonantal element of a diphthong may be marked thus ũ.

59. Finally, some shades of sound may be marked by placing a small letter as index to a large one: thus ʃ^s means a variety of ʃ rather resembling s.

'NARROW' AND 'BROAD' TRANSCRIPTION

60. The style of transcription used in any particular case depends to some extent on the object in view. In works of a scientific character in which it is desired to have separate symbols for all the shades of sound existing in several languages, a very large number of symbols and diacritical marks may be necessary (with the result that the transcription of any one of the languages becomes complicated and difficult to read). Transcriptions of this kind are called *narrow* transcriptions.

61. When, however, the object is rather to deal chiefly with one language and that too from a strictly *practical* point of view, it is desirable that the form of transcription should be simple and should have as few diacritical marks as possible. Such a style of transcription is called a *broad* transcription.

62. A *broad* transcription may be more accurately defined as a transcription obtained by using the minimum number of symbols requisite for representing without ambiguity the sounds of one language independently of other languages.

63. The necessity for the use of broad forms of transcription in practical work becomes evident when we consider the enormous number of minute shades of sound in existence. If we compare any two languages, the number of sounds which are absolutely identical in each is extremely small. Take the case of such a simple sound as p. The English p in *pat* is distinguished from the French p in *patte* by the presence of a certain 'aspiration';

1. The vowel might also be written ɪ in accordance with the 6th Principle (e), p. 17.

yet it would be highly inconvenient in practical work to have to indicate this aspiration everywhere by writing **p'** in English transcriptions¹).

64. Similarly in an ordinary practical phonetic script (as distinguished from a more detailed form of script suited for scientific purposes) it is unnecessary to have separate symbols for the French vowels in *note* (**nɔt**) and *porte* (**pɔrt**) (the latter of which is slightly lower than the former) because it is the regular rule that **r** has a lowering effect on preceding vowels in French. Again, in ordinary practical phonetic script it is not usually necessary to use two symbols for the two varieties of **l** heard in the most usual pronunciation of the word *little*, because we know once for all that the 'clearer' variety is regularly used before vowels and the 'darker' variety before consonants and finally.

65. The general rule for strictly *practical* phonetic transcription is therefore to *leave out everything that is self-evident, and everything that can be explained once for all*. In transcribing any given language it is in general sufficient to represent the *distinctive* sounds only; for each distinctive sound the typical international symbol should be chosen; and, if necessary, the exact shades of sound used either throughout or in certain positions may be explained (with the use of modifiers) in an introductory note.

66. In scientific work a more elaborate form of script is often necessary. The extent to which the use of modifiers should be resorted to depends, however, on circumstances. In some cases it may be useful to adopt a compromise between a narrow and a broad notation. Thus a teacher of English in France may find it desirable to mark the English vowels in *fit*, *put* with the grave accent (**fĭt**, **pĭt**) in order to remind his pupils continually of the characteristic quality of these sounds; a teacher of French in England might often with advantage write **peopl** in order that his pupils may be less liable to pronounce the final **l** in *people* like that in the English word *people* **pi:pl**.

67. These are points on which each person must use his own discretion. They do not in any way affect the general principle referred to above (§ 65).

1. This must, however, be done in such languages as Syriac and Chinese, where the aspirated and unaspirated **p** are distinctive sounds.

PRINCIPLES OF TRANSCRIPTION FOR LANGUAGES HITHERTO NOT TRANSCRIBED

68. We give here a summary of some of the more important principles of transcription for the guidance of missionaries and others wishing to record the pronunciation of languages hitherto not transcribed.

69. *1st Principle.* In settling for any language the form of transcription best suited for practical purposes (as distinguished from scientific purposes), the language should be regarded by itself without reference to other languages.

70. *2nd Principle.* It is necessary to ascertain what are the *distinctive* sounds in the language, i. e. those which if confused might conceivably alter the meanings of words. Shades of sound which are occasioned by proximity to other sounds, absence of stress and the like, very often do not require special symbols. For examples see § 64.

71. *3rd Principle.* Typical single sounds should be represented (as far as possible) by single letters without diacritical marks. Diacritics should (as far as possible) only be resorted to for the purpose of representing shades or varieties of the typical sounds.

72. *4th Principle.* The vowel letters *a, e, i, o, u*, should be taken to have their Italian values, i. e., roughly speaking, the values which they have in the English words *calm, get, machine, note, rule*.

73. *5th Principle.* If the language does not contain more than one variety of each of the sounds *e, i, o, u*, these symbols should be used for the varieties occurring. If the language contains one sound of the type *a*, not being a distinctly 'back' variety, the symbol *a* should be used. If the language contains a sound of the type of French *u* it should be represented by *y*; if it contains one sound of the type of French *eu*, not being a distinctly 'close' variety, it should be represented by *œ*.

74. *6th Principle.* (a) If the language contains two distinctive varieties of *e*, the variety with higher tongue position should be represented by *e* and the variety with lower tongue position should be represented by *ɛ*. Such are the French sounds of *e* (*e*) and *è* (*ɛ*).

(b) If the language contains two distinctive varieties of *o*, the variety with higher tongue position should be represented by *o* and the variety with lower tongue position by *ɔ*. Such a pair is found in the English words *note* (*o*), *not* (*ɔ*). Another

(slightly different) pair of the same kind is found in the French words *tôt* (o), *tort* (ə).

(c) If the language contains two distinctive varieties of a, the variety with tongue further back should be represented by **ɑ** and the variety with tongue further forward by **a**. Such are the French sounds in *pas* (ɑ) and *page* (a).

(d) If the language contains two distinctive varieties of **œ**, the variety with higher tongue position should be represented by **ø** and the variety with lower tongue position by **œ**. Such a pair is found in the French words *peu* (ø), *peur* (œ).

(e) If the language contains two distinctive varieties of **i** or **u**, the varieties with higher tongue position may be represented by **i**, **u** and those with lower tongue position by **ɪ**, **ʊ**.

75. 7th Principle. If the language contains sounds which to an untrained ear sound like the groups **kj** (as in *cube* **kju:b**), **gj**, **nj** (as in *onion*), **lj** (as in *million*), but are felt by natives to be *single sounds* and not compounds, the appropriate symbols are generally **c**, **j**, **p**, **Δ**, respectively.

76. 8th Principle. When vowels of similar though distinct quality are connected by the relation that one is always longer than the other under similar circumstances (i. e. when surrounded by the same sounds and pronounced with the same degree of stress), a simplification of the phonetic transcription may sometimes be effected by using only one symbol with or without a length-mark. Thus many transcribers of English write the vowels in *feet* and *fit* as **i:** and **i** respectively, instead of writing **i** and **ɪ** according to the 6th Principle (e). (It will be observed that the first of these vowels is always longer than the second under similar circumstances, e. g. the vowel in *feet* is longer than that in *fit*, the vowel in *heed* is longer than that in *hid*, the second vowel in *linseed* is longer than that in *acid*).

FURTHER DEVELOPMENTS

77. Completeness and perfection are ideals unattainable in this world, and the International Phonetic Alphabet lays no claim to either. It is freely admitted that some of the symbols might be improved; and it is evident that it may also be necessary to invent new signs either for newly discovered sounds or to distinguish shades of sound hitherto left undistinguished. Improvements are continually suggested by members of the Association and discussed in the *Maitre Phonétique*; but none are definitely adopted

SPECIMENS

86. In illustration of the above mentioned principles of transcription, we now give some specimens of phonetic transcription. The texts are versions of the well known fable of the 'North Wind and the Sun' in various languages¹).

87. It may well be that a reader, on examining the pronunciation here given of his own language, may find some forms which do not correspond with his own pronunciation. This arises partly from the fact that *no two persons pronounce exactly in the same way*, and partly from the fact that *the same person will often pronounce a word differently under different circumstances*. Phonetic writing reproduces such differences, and therefore a text which reproduces exactly the pronunciation of one person does not necessarily correspond exactly with that of another. We have endeavoured as far as possible to indicate the average pronunciation of educated persons in each case. The reader will do well to note the points in which his pronunciation differs from that indicated in the specimens.

TEXT

The North Wind and the Sun were disputing which was the stronger, when a traveller came along wrapped in a warm cloak. They agreed that the one who first made the traveller take off his cloak should be considered stronger than the other. Then the North Wind blew with all his might, but the more he blew, the more closely did the traveller fold his cloak around him; and at last the North Wind gave up the attempt. Then the Sun shone out warmly, and immediately the traveller took off his cloak; and so the North Wind was obliged to confess that the Sun was the stronger of the two.

SOUTHERN ENGLISH

[When not otherwise marked the stress is on the first syllable of the most important words. — Two consecutive vowels form a diphthong, the second element being the consonantal element. —

1. The Editors will be pleased to receive versions of this fable in languages or dialects not included here, for publication either in subsequent editions of this pamphlet or in the *Maître Phonétique*.

i, u, ə, ə without length-marks are lax. — i in unstressed syllables = ɪ. i:, u: are often diphthongized (ij, uw) especially when final. — Short ə is very open when final (= ʌ); ɐ: stands for ě.

t, d, n, l are formed with the tip of the tongue against the teeth-ridge (gums). — r is generally fricative (= ʀ), though some speakers use a single flap of the tongue when intervocalic. — A 'dark' variety of l (ɫ) is used finally and before consonants. — Initial p, t, k are slightly aspirated.

o, ɔ stand for ɒ, ɔː respectively. Many speakers use ɐ for ɛ.]

ðə nɔ:θ wind ənd ðə sən wə: dis'pjutɪŋ wɪtʃ wəz ðə strɒŋgə,
wən ə trævələ keɪm ə'lɒŋ ræpt ɪn ə wɔ:m klouk. ðeɪ ə'grɪd ðæt
ðə wən hu: fə:st meɪd ðə trævələ teɪk ɔ:f (h)ɪz klouk ʃʊd bi
kən'sɪdəd strɒŋgə ðən ði ʌðə. ðən ðə nɔ:θ wind blu: wɪð ɔ:l hɪz
maɪt, bət ðə mɔ: hɪ: blu:, ðə mɔ: klousli dɪd ðə trævələ fould
(h)ɪz klouk ə'raʊnd hɪm; ənd ət lɑ:st ðə nɔ:θ wind geɪv ʌp ði
ə'tɛm(p)t. ðən ðə sən ʃən aʊt wɔ:mli, ənd ɪ'mɪ:dʒətli ðə trævələ
tʊk ɔ:f (h)ɪz klouk; ənd sʊ ðə nɔ:θ wind wəz ə'blaɪdʒd tə
kən'fɛs ðæt ðə sən wəz ðə strɒŋgər əv ðə tu:.

Examples of combinations of sounds not occurring in the above: — *cheer* tʃɪə, *fairness* fɛənɪs, *poor* puə, *nature* neɪtʃə.

For some purposes (e. g. in books dealing with Scottish pronunciation) it appears desirable to have a form of phonetic spelling of Southern English independent of the length mark ː. The following form is suggested for such cases.

ðə nʌθ wind ənd ðə sən wə dis'pjutɪŋ wɪtʃ wəz ðə strɒŋgə,
wən ə trævələ keɪm ə'lɒŋ ræpt ɪn ə wɒm klouk. ðeɪ ə'grɪd ðæt
ðə wən hu fəst meɪd ðə trævələ teɪk ɔf (h)ɪz klouk ʃʊd bi kən-
'sɪdəd strɒŋgə ðən ðɪ ʌðə. ðən ðə nʌθ wind blu wɪð ɔl hɪz mɑt,
bət ðə mʌ hi blu, ðə mʌ klousli dɪd ðə trævələ fould (h)ɪz klouk
ə'raʊnd hɪm; ənd ət lɑst ðə nʌθ wind geɪv ʌp ðɪ ə'tɛm(p)t. ðən
ðə sən ʃən aʊt wɒmli, ənd ɪ'mɪdʒətli ðə trævələ tʊk ɔf (h)ɪz klouk;
ənd sʊ ðə nʌθ wind wəz ə'blaɪdʒd tə kən'fɛs ðæt ðə sən wəz ðə
strɒŋgər əv ðə tu.

The additional words at the end of the preceding version would appear as follows: — tʃɪə, fɛənɪs, puə, neɪtʃə.

NORTHERN ENGLISH

[Stress and sound values as in Southern English with the following exceptions. *e*, *o*: are tense and only slightly diphthongized. — *r* is slightly trilled. *ɹ* is very weak and often loses its consonantal character, producing merely an 'inverted' (cerebral) modification of the preceding vowel.]

ðə nəθ wind ənd ðə sən wɛɹ dɪs'pju:tɪŋ hwɪtʃ wɛz ðə strɔŋgɐɹ,
 hwen ə travləɹ kɛ:m ə'lɔŋ rapt ɪn ə wɔɹm klo:k. ðe: ə'grɪd ðət
 ðə wən hu: fɛɹst me:d ðə travləɹ te:k əf hɪz klo:k ʃud bɪ kɒn-
 'sɪdəd strɔŋgɐɹ ðən ðɪ ʌðɐ. ðɛn ðə nəθ wind blu: wɪθ ə:l hɪz
 maɪt, bət ðə mɔ:ɹ hi: blu:, ðə mɔ:ɹ klo:slɪ dɪd ðə travləɹ fo:ld
 hɪz klo:k ə'raʊnd hɪm; ənd ət last ðə nəθ wind ge:v ʌp ðɪ
 ə'tɛm(p)t. ðɛn ðə sən ʃən aut wɔ:ɹmli, ənd ɪ'mɪ:dʒetli ðə travləɹ
 tuk əf hɪz klo:k; ənd so: ðə nəθ wind wɛz ə'blaɪdʒd tu kɒn'fɛs
 ðət ðə sən wɛz ðə strɔŋgɐɹ əv ðə tu:.

The additional words would appear as follows: — tʃɪ:əɹ, fe:ənəs,
 pu:əɹ, ne:tʃɐɹ.

SCOTCH PRONUNCIATION

[Stress and sound values as in Southern English with the following exceptions. — Length may be significant; thus the *i* in *agreed* is long while that in *deed* is short. Tense and lax *i* must therefore have separate symbols (*i* and *ɪ*). Tense and lax *ɔ* are distinguished as *ɔ̄*, *ɔ*. *u* is always tense. *ɔ* is as in French (higher than in Southern English). *ɪ* = *ɪ̄*. *e*, *o* are tense and not diphthongized. — *aɪ* often becomes *əɪ* when not followed by *v*, *z*, *ð* or *r*. — *r* is normally trilled, but is often reduced to a single flap of the tongue or to the fricative *ɹ* when final or followed by a consonant.]

ðə nəθ wind ənd ðə sən wɛɹ dɪs'pjutɪŋ mɪtʃ wɛz ðə strɔŋgɐɹ
 mɛn ə travləɹ kem ə'lɔŋ rapt ɪn ə wɔɹm klok. ðe ə'grɪd ðət ðə
 wən hu fɛɹst me:d ðə travləɹ tek əf hɪz klok ʃud bɪ kən'sɪdəd
 strɔŋgɐɹ ðən ðɪ ʌðɐ. ðɛn ðə nəθ wind blu wɪθ əl hɪz maɪt, bət
 ðə mɔɹ hi blu, ðə mɔɹ kloslɪ dɪd ðə travləɹ fo:ld hɪz klok ə'raʊnd
 hɪm; ənd ət last ðə nəθ wind ge:v ʌp ðɪ ə'tɛm(p)t. ðɛn ðə sən
 ʃən aut wɔɹmli, ənd ɪ'mɪdʒetli ðə travləɹ tuk əf hɪz klok; ənd so
 ðə nəθ wind wɛz ə'blaɪdʒd tu kən'fɛs ðət ðə sən wɛz ðə strɔŋgɐɹ
 əv ðə tu.

The additional words would appear as follows: — tʃɪɹ, fɛɹnɪs,
 puɹ, netʃɐɹ.

AMERICAN ENGLISH

(Typical pronunciation for New York State and the central portion of the United States)

[Stress and sound values as in British English with the following exceptions. **ɹ** stands for **r**; when final or followed by a consonant it causes considerable 'inverted' (cerebral) modification of the preceding vowel. Vowels are generally slightly nasalized when they stand next to nasal consonants.]

ðə nəʊθ wɪnd ən ðə sən wɔːr dɪs'pjʊtɪŋ əz tə hwɪtʃ wəz ðə strɑːŋɡɪst, hwən ə trævələz keɪm ələʊŋ, æpt ɪn ə wɔːm klouk. ðə əɡruːd ðæt ðə wæn hu meɪd ðə trævələz teɪk əf ɪz kout fəɪst fəd bi kən'sɪdərd strɑːŋɡəz ðən ðə ʌðə. ðən ðə nəʊθ wɪnd bljuː wɪð əl ɪz maɪt; bət ðə moːr i bljuː, ðə moːr klouslɪ ðə trævələz fouldɪd ɪz klouk ə'ʊəʊnd ɪm; ənd et læst ðə nəʊθ wɪnd geɪv ʌp ði ə'tempt. ðən ðə sən fɔːn ʌʊt wɔːmlɪ¹), ənd ɪn ə fju moːmənts ðə trævələz tɔk əf ɪz klouk. so ðə nəʊθ wɪnd wəz ə'blaɪdʒd tə kən'fes ðæt ðə sən wəz ðə strɑːŋɡəz əv ðə tuː.

FRENCH (Northern)

[Stress is generally on the last syllable of important words (on the last but one, if the vowel of the last is *ə*). — Two consecutive vowels do *not* form a diphthong. — Initial and final voiced plosives and fricatives are fully voiced. — Initial **p**, **t**, **k** are unaspirated. **t**, **d**, **n**, **l** are dental. — **r** may be **r** or **ʀ** (or even **ʁ** in Parisian speech).

u, **ə** are somewhat advanced from the back position. **ē**, **œ**, **ō** stand for **ɛ̃**, **œ̃**, **ɔ̃**. **ō** might also be written **õ**.]

la biːz e l sɔləːj sə dɪspɪtɛ, ʃakœ asyːrɑ k il etɛ l ply fɔːr, kūt ɪz ɔ vy œ vwajazœːr ki s avɑːsɛ, ɑvlɔpɛ dɑ sɔ mɑːto. i sɔ tɔːbe dakɔːr, kə sɛlɥi ki arɪvrɛ l prəmje a fɛːr oːtɛ sɔ mɑːto o vwajazœːr, sɛrɛ rɡardɛ kɔm lɛ ply fɔːr. alɔːr la biːz s ɛ mi a sufle d tut sa fɔrs; mɛ ply ɛl sufle, ply l vwajazœːr sɛːrɛ sɔ mɑːto otur dɛ lɥi; e a la fɛ la biːz a rɔːsɛ a lɛ lɥi fɛːr oːtɛ. alɔːr lɛ sɔləːj a kɔmɑːsɛ a brɪje, e o bu d œ mɔmɑ l vwajazœːr, rɛfɔːfɛ, a oːtɛ sɔ mɑːto. ɛːsi la biːz a dy rkɔnɛːtrɛ kɛ l sɔləːj etɛ l ply fɔːr dɛ dɔ.

1. Or bə'gæn tə ʃaɪn ʌʊt hæt.

GERMAN (North)

[Stress as in English. — Initial **p**, **t**, **k** are aspirated. — Two consecutive vowels form a diphthong, the second element being the consonantal element. — Short **i**, **u** are lax and might be written **ɪ**, **ʊ**. **ɑ** is somewhat advanced from the back position. **ɛ**, **ə**, **ø** stand for **ɛ⁺**, **ə⁺**, **ø⁺**; they are somewhat lowered before **r**. **ʃ** is accompanied by lip-rounding. **r** is **r** or **ʀ**; it is weak when final or followed by a consonant.]

RUSSIAN (St. Petersburg pronunciation)

[To avoid numerous long explanations, certain non-significant shades of sound have been distinguished in the following transcript. — Unstressed vowels are generally extremely short, lax and obscure in quality.

а is an advanced variety. u, ɔ, ə stand for у, о, ё. ĭ = an advanced и. i is not very tense. e and i are very short obscure vowels, the first being nearer to ĭ and the second nearer to i. y is i with slight lip-rounding added. ü is e with slight lip-rounding added. ʌ is equivalent to ɔ without lip-rounding.

Before palatalized consonants the vowels а, ĭ are somewhat advanced, and e, i are somewhat raised.]

CZECH (of Bohemia)

[ř is a rolled r pronounced with strong simultaneous friction.]

severa:k(?)a sluntse se fia:dali, gdo z pix je silpešři; f tōm spatřili pōtsestne:řo, kteri kra:řel zafialen pla:řem. ųjednali tedi, že ten se ma: pōvagovaci za silpešři:řo, gdo přvpi doka:že, ųabi si pōtsestni svle:kļ pla:ře. tu zatřal severa:k fořkaci ze řři sili; ųale řřim viťs fořkal, ciťm viťse se pōtsestni zafiaľoval do sve:řo pla:ře. kōetřje vzdal se severa:k marn:řo'ũ:sili. paķ zatřalo slunķo svi:cit(?)a řřa:t, ųa za peřaki (?)okamřik pōtsestni; ktere:mu bilo řořko, sxořil pla:ře. tak musil severa:k (?)uznaci, že sluntse je silpešři:.

HUNGARIAN

[The stress is on the first syllable of every important word. p, t, k are unaspirated, as in French. — r is strongly rolled; v has very little friction; t, d, n, l are dental. — Stressed ε is very near to the English æ in *man*; unstressed ε has a somewhat higher tongue position than stressed ε. a is very much retracted and is practically indistinguishable from the English vowel in *not*.]

az e:saki se:l nařban vitatkozot a nappal, hoř ketteřyk koeryl meřik az eřo:řeb mido:n eř utat la:ttak, kaba:ca:ba burkolo:dzva kozeľedni. erre elhata:řo:řta:k, hoř az les a řo:řteř, ameřik elo:b ke:řseri:ti az utat, hoř kaba:ca:t ľevěffe. az e:saki se:l, ege:s eřeře:t oesseesedve fujni kezdet, de menne:l eřo:řebben fujt, anna:l sorořabra vonta oesse kaba:ca:t az utat, miťg ve:gre az e:saki se:l felhazot ta:mada:řa:val. erre a nap kezdet řytni se:ř meľegen e:ř ne:ha:ř ma:řođperts mu:ľva a va:řdoř ľevetette kaba:ca:t. i:ř ha:t az e:saki se:l ke:řtelen volt elisřmēni, hoř a nap eřo:řeb na:la:na:l.

FINNISH

[The stress is on the first syllable of all important words. In the diphthongs (even in *uo* and *ie*) the second element is the weaker. p, t, k are unaspirated as in French. v, j are pronounced

without much friction. Before a pause final *-n* is very weak. — In groups of two consonants, the second (if not doubled) is extremely short.

— *e* is *e*₊; *i* is *i*₊, the lowering being particularly noticeable in the diphthongs *ai*, *ei*, etc.; many speakers use a lowered *u* and *y* in the diphthongs *au*, *ay*, etc.; *a* is a kind of advanced *a*₊ or retracted *æ*₊; *o* is *o*₊; *ø* is *ø*₊; *y* is *y*₊.]

pohjatu:li ja auringko vaittelivat, kummalla olisi enempi voima:, kun samalla nakivat 'kulkian, jolla oli ylla:n lammin vaippa. silloin sovitti:n, etta 'se on vakevampi, joka 'pikemmin sa: kulkialta pa:llysva:tte:m pois. nytkø:s pohjatu:li puhaltama:n ni(:)n etta 'viuhui; mutta mita kovempa: se puhalsi, sita 'tarkemmin ka:ri vaim mies vaippa: ymparille:n; ja vi:mein tuli heittiki:n koko homman sikse:n. silloin alkoi auringko lampimasti lloista:, eika aika:ka:n, ni(:)n kulkia ri:sui vaippansa. 'ni:n oli tu:lem pakko myønta:, etta auringko oli kun 'olikin vakevampi.

SOUTH AFRICAN DUTCH

[Stress is on the first syllable of important words, when not otherwise marked. — Two consecutive vowels form a diphthong the second element being the consonantal element. — *e* = *e*₊; *o* = *o*₊, except in the diphthongs *ei*, *ou*, where the *e* is somewhat retracted, and the *o* somewhat advanced; *ə* = *ë*₊, *æ* = *ö*₊; *h* = *fi*.]

URDU

(compare transliteration on p. 32)

[*t*, *d*, *n*, *l*, *r* are dental; *ṭ*, *ḍ* are 'inverted' (cerebral). *r* is formed by curling back the tip of the tongue and then shooting it forwards so that it makes a single flap against the teeth-ridge (gums). — *p*, *t*, *c*, *k* (without following *h*) are unaspirated. In *bh*, *dh*, *jh*, *gh* the *h* is voiced. — The pronunciation of the

sounds here represented by **c, j** seems to vary between pure **c, j** and the English **tʃ, dʒ** and the groups **tj, dj**.

— **i, e, a, o, u**, are always long in stressed syllables. — **i, u** are as in the English *it, put*; they are always short. **a** is a variety somewhat resembling the English **ʌ** in *much*. — **e, o** stand for **ə, ɒ**.]

aftab aor bad ɪ fɪmɐl apas mē bahəs kar rahe the kɪ ham dono mē se kaon zoravar hae, kɪ ek musafir garm cɔkə oɾhe hue cala aja. vnhō ne apas mē ittifaq kija kɪ us musafir ka cɔkə jo pahəle utarva de vohi zoravar samjha jae.

bad ɪ fɪmɐl ne maqdur bhar zor lagaja, maɣar ʃʃū ʃʃū us kɪ jhokē tez tez calī tʃt̪ tʃt̪ musafir cɔkə mē cɪmatʃkar lɪpta gea jahū tak kɪ ottara apne jihad se baz aja.

phir aftab tezi se camak(ə)ne laga, to jhat musafir ne cɔkə utar dia, aor bad ɪ fɪmɐl ko man(ə)na paɾa kɪ ham dono mē se aftab zoravar hae.

PANJABI (Northern Mohammedan dialect)

[**t, d**, are dental, **n, l, r** alveolar; **r** is formed by a single flap of the tongue. **t, d, n, l**, are 'inverted' (cerebral); **r** as in Urdu; **tʃ, dʒ** as in Italian *ciò, già*. **p, t, tʃ, k** (without following **h**) are unaspirated. — **i, a, u** are as in the English *it, much, put*. **n** tends to nasalize vowels next to it.

^ represents a peculiar tone of high pitch preceded by a slight rise and followed by a slight fall. In connected speech it often becomes a simple high tone.

˙ is used provisionally to represent a glottal sound somewhat resembling the Arabic *‘ain*. It is difficult to say whether this sound is really a consonant or whether it is not rather a low rising tone. When initial it is accompanied by a slight aspiration.]

parbat di va: te diũ da apertʃ tʃʌqɪa si pai sadde vɪttʃō kêra bāla taɣra e. ik(k) rai laga aunda si, dʒɪs garm loi dualə vɫeːi ɔi si. ɔn˥ã fæsla kita pai jêra pæle rai di loi luæ, ŋoi bāuta taɣra sâmdʒea dʒae. pher parbat di va: pure zor naɫ vaggəɪ laɣi. paɾ dʒɪnna os tɪl laea onne vâdd zor naɫ rai loi dualə vɫeːi; tʃhekɪe va khæɪa tʃhad ditta. pher ôddrō dâdi tɔpp nɪkl̩ pai. te tʃʌt̪ pat̪ os loi lã lei. te va: nũ mannə pea pai saddeũ dôũ vɪttʃō diũ taɣra e.

CHINESE (Cantonese dialect, colloquial style)

[The six tones are indicated by the signs ˊ ˋ ˊˊ ˋˋ ˊˋˊ ˋˋˋ; for their values see Jones & Woo, *Cantonese Phonetic Reader* (London University Press).

— *p*, *t*, *ts*, *k* are used for the aspirated consonants (*p*, *t*, *k* are much the same as in English); *p*, *t*, *k* are unaspirated and sound to an English ear rather like *b*, *d*, *g*. Final *p*, *t*, *k* are pronounced without explosion. *s* is more accurately *sʃ*. — Final *i* is lower and further back than the English vowel in *see*. *i*, *u* tend towards *ɛ*, *o* when followed by *k* or *ŋ*. *ɨ* is used to represent a sound intermediate between *i* and *y*.

— In the diphthongs the second element is the consonantal element. — Length is significant in the case of the sound *a*.]

PHONETIC SPELLING

The utility of the International Phonetic Alphabet is not confined to the actual representation of pronunciation. The system may also be used (with suitable conventions) as a general *system of spelling* for any language, and as a means of *transliteration* of the native spelling of many languages. We give here an example of **phonetic spelling of English**. This form of spelling is based on the principle that it should be capable of being easily read and written by speakers of any dialect. For various reasons it is found expedient to choose Northern English pronunciation as the basis for this system of spelling. By making a few obvious conventions, however, the system is practically phonetic for speakers of Southern English and other dialects.

ðə nɔrθ wind ænd ðə sən wɜr dispju:tɪŋ hwɪtʃ wəz ðə strɔŋgɜr, hwɛn ə trævələr keɪm ələŋ ræpt ɪn ə wɜrm klo:k. ðe: əgrɪ:d ðæt ðə wən hu: fɜrst me:d ðə trævələr te:k əf hiz klo:k fud bi: kɒnsɪdərd strɔŋgɜr ðæn ði ʌðər. ðɛn ðə nɔrθ wind blu: wɪð ə:l hiz mait, bət ðə mɜr hi: blu: ðə mɜr klo:sli dɪd ðə trævələr fo:ld hiz klo:k əraʊnd hɪm; ænd æt last ðə nɔrθ wind ge:v ʌp ði ətɛmpt. ðɛn ðə sən fən aʊt wɜrmlɪ, ænd ɪmɪdʒətli ðə trævələr tuk əf hiz

SCRIPT FORMS

[illegible]

SPECIMEN OF PHONETIC WRITING

The following is the script form of the passage in phonetic spelling given on p. 19.

So nert wind and so sen was dispujting
hwiff was so stryger hwen a travler kem slay
rept in a warm klok. De sgrid dat so wen hu first
med so travler tek af his klok jud bi konsiderd
stryger den di'ndr. Den so nert wind blu wid et
his mait, bat so mae hi blu so mae kloeli did so
travler fold his klok round him; and et last so nert
wind gew ap di stempt. Den so sen fan aut warmli, and
imidytkli so travler tek af his klok; and so so nert wind
was oblaidyd te konfes dat so sen was so stryger as so tu.

NOTICE TO MEMBERS OF THE INTERNATIONAL PHONETIC ASSOCIATION.

The Journal.

Communications relating to the journal should be addressed to *Paul Passy, 20 Rue de la Madeleine, Bourg-la-Reine (Seine), France* (for French and Romance languages), or to *Daniel Jones, University College, London, W. C.* (for other languages). Articles intended for the journal should be written in phonetic characters and very legibly; they should be written on quarto sheets and on one side of the paper only. The International Phonetic Alphabet must be used, but each author is free to employ any language and to represent any style of pronunciation he may prefer. As regards minute shades of sound, authors are requested to indicate them as far as practicable by means of notes, and not to overload the transcription with diacritical marks. Authors receive a proof of articles inserted in the journal; such proofs should be corrected carefully, without making any important alterations, and sent back to the editor (*not to the printer*) by return of post. *Only communications of members are inserted in the journal.*

The administration.

Communications relating to the administration of the Association should be addressed to *Fonetik, Bourg-la-Reine (Seine), France*, or to *Daniel Jones, University College, London, W. C.*

The names of new members are published in the journal, together with the names of those by whom they are introduced. The names of active members are preceded by *; the names of life members are followed by V.

Members desiring to notify changes of address should send with their applications the sum of 1 d., and should mention their membership number (given in the January number of the journal).

Missing Numbers.

Members not receiving any number of the journal should apply for it within one month of the date of publication. Applications made later than this should be accompanied by the sum of 1 d. (1 d. may be sent from abroad by using a reply postcard).

Reviews.

Authors and publishers of books relating to linguistics or pedagogy desiring to have their works reviewed in the journal should send 2 copies (or one copy if the value of the book exceeds 7 s. 6 d.) to one of the Editors.

Advertisements.

The scale of charges for advertisements in the journal may be obtained on application to the Advertisement Editor, Monsieur E. Lemaire, 11 Rue Carpeaux, Paris 18°.

The charge for private advertisements is 5 d. per line of 12 words or an equivalent space. Private advertisements should be sent to one of the Editors.

Ordinary members whose subscriptions have been paid before Jan. 1st have the right to 10 lines of advertisement free of charge during the year. Active members have the right to 25 lines, and members of the Council to 50 lines.

RECENT PUBLICATIONS OF THE INTERNATIONAL PHONETIC ASSOCIATION

The Means of Training in Phonetics available for Modern Language Teachers. By L. H. ALTHAUS. Price 10 d. To members 5 d.

The Transition from Phonetic to Ordinary Spelling. By V. PARTINGTON. Price 7 d. To members 4 d.

Scenes from Shakespeare in the Original Pronunciation. By D. JONES. Price 10 d. To members 5 d.

Un Alphabet Organique. Par PAUL FASSY et D. JONES. Price 7 d. To members 4 d.

Court Exposé de la Prononciation Russe. Par L. ŠČERBA. Price 7 d. To members 4 d.

Notes sur la Prononciation de la Langue Mandarine. Par R. CH. GUERNIER. Price 1 s. To members 6 d.

In Preparation.

Index analytique du Maître Phonétique 1889—1912. Par J. L. RAYNER.
Orthographe et Prononciation Tchèque. Par A. FRINTA.

Back numbers of the Maître Phonétique may be had at the following prices:

		To members	To non-members
1889	complete	8 s.	12 s.
1890, 1891, 1893	"	12 s. each	20 s. each
1896, 1897, 1898	"	20 s. each	32 s. each
1900, 1902	"	4 s. each	6 s. 6 d. each
1902, 1903, 1904	"	3 s. 6 d. each	6 s. each
1905, 1906, 1907			
1908, 1909, 1910			
1911, 1912			

The years 1892, 1894, 1895, 1899 and 1901 are no longer sold separately.

Complete collections are very rare. There are one or two for sale (1889—1912) price £ 10 to members, £ 14 to non-members.

Note. The Association is willing to purchase back numbers of the journal prior to 1902. Offers should be addressed to the Assistant Secretary.
